Technical Content Audit and Information Architecture

Current-state gap analysis, content taxonomy, navigation blueprint and approval-ready remediation backlog

Document ID	PSRO-IA-001	Revision	0.1
Owner	Demo Content Operations	Status	Illustrative draft

Scope note: The Public Services Resource Office (PSRO) is an invented organization. All assets, personas, metrics, evidence IDs, and review outcomes in this document are synthetic. No federal agency approved or used this procedure.

Executive summary

PSRO maintains 12 hypothetical intranet and public resource entries. A synthetic inventory review found three stale items, one duplicate appointment guide, inconsistent keyword coverage, and weak links between search terms and authoritative resources. The proposed design reduces duplicate content and makes owner accountability explicit. This is an example assessment, not a live system observation.

Metric	Baseline	Planned target
Known duplicate assets	1 of 12	0 after approved consolidation
Assets marked stale	3 of 12	0 stale content publicly served
Zero-result search rate Oct 2026	184 / 1690 = 10.9%	< 6% pilot target
Ownership documented	12 of 12	12 of 12 with backup owner

Assessment method and evidence hierarchy

1. Inventory all public and intranet assets; preserve asset IDs, owners, last reviews, version references, and URLs.
2. Interview a content owner, one service-desk employee, one accessibility reviewer, and one end-user persona; record conflicting interpretations and obtain clarifications.
3. Cluster records by user intent rather than internal department names; tag each asset with approved keywords and synonyms.
4. Flag stale content older than policy-specific review windows, duplicates with overlapping user intent, missing owner, inaccessible formats, and broken navigation.
5. Route proposed changes through peer review, subject-matter verification, accessibility review, and authorizing official approval.
6. Publish redirect decisions, confirm search index behavior, and measure performance 30 and 60 days later.

Illustrative walkthrough prompts: Who is the intended reader? What decision should this content enable? Which systems provide the authoritative facts? What changes trigger an urgent update? What evidence confirms the page works for keyboard and screen reader users?

Findings, risk and remediation backlog

ID	Finding	Risk	Remediation and verification
IA-01	LIB-007 duplicates scheduling instructions	Moderate	Compare versions; retain LIB-002; redirect LIB-007 after signoff; search test
IA-02	LIB-003 and LIB-006 stale	High	SME review; update or unpublish; confirm

			source of truth and record approval
IA-03	LIB-011 old eligibility guidance	High	Confirm policy with owner; reconcile forms; version and review new guidance
IA-04	Search synonyms missing for renew ID	Moderate	Map to replacement ID and verify queries with zero-result report
IA-05	Downloadable materials lack format-level accessibility evidence	High	Assign accessibility QA per Section 508 baseline and log results

Proposed information architecture

- Get started: eligibility, required information, first steps
- Manage my account: sign in, recover access, update contact information
- Applications and forms: apply, download, check status
- Appointments: schedule, prepare, reschedule
- Accessibility and help: request support, provide feedback, alternative formats
- Resource library: approved printable information, filters by format, category, language and owner

Use consistent title syntax: verb + object (“Check application status”). Search indexing uses user-language synonyms, not keyword stuffing. Canonical IDs survive title changes. Resource downloads display file type, language, revision date and accessible-format request route.

Execution and governance

Phase	Owner	Evidence	Exit criterion
0–15 days	Content Lead	Inventory, owner approvals, interview notes	All 12 asset owners confirmed
16–30 days	SMEs + Accessibility	Edited drafts; test logs; review comments	High-risk content resolved or blocked
31–45 days	Web Team	Redirect map and search validation	Duplicate retired; critical queries pass
46–60 days	Analytics Lead	Monthly report and feedback trend	Post-release measures documented

Out of scope: actual TSA content, operational government data, live SharePoint access, or authorization to make federal production changes.

Reference basis and limitations

Primary reference: https://www.section508.gov/test/documents/ . Additional source links and applicability are documented in review/REFERENCE_REGISTER.md.

Compliance note: Section 508 applies to covered federal ICT; WCAG 2.0 A/AA is incorporated by reference in the revised standards. WCAG 2.2 is noted only as complementary guidance. Automated checks do not establish full conformance. DHS Trusted Tester certification is not claimed.

2026 federal digital-services and records cross-check

Standards review: November 3, 2026. These additional controls and verification expectations are recommendations or conditional obligations for real federal systems; they are not evidence that the fictional PSRO system is approved, tested or compliant.

Digital service policy

For a real federal public website, confirm agency applicability of the 21st Century Integrated Digital Experience Act and OMB M-23-22. Evaluate mobile usefulness, clear user journeys, search/navigation, privacy/security, accessibility, and consistent service ownership. These are additional governance considerations, not completed testing in PSRO.

Information lifecycle

Before deleting or replacing content, preserve approved recordkeeping copies and related version, link, sitemap and approval evidence under the responsible agency records officer and applicable NARA-approved schedule. A content team cannot simply choose a universal retention period.

Validation evidence

For each issue, record owner signoff, source of truth, affected URL/asset ID, redirected search terms, accessibility review reference, baseline versus post-change metric and check date. Do not treat simulated targets as achieved outcomes.
