Digital Service Analytics and Customer Feedback Report

Synthetic July–October 2026 measures, reporting definitions, trend analysis and recommended experiments

Document ID	PSRO-AN-004	Revision	0.1
Owner	Demo Content Operations	Status	Illustrative draft

Scope note: The Public Services Resource Office (PSRO) is an invented organization. All assets, personas, metrics, evidence IDs, and review outcomes in this document are synthetic. No federal agency approved or used this procedure.

Data sources and definitions

The dataset is purpose-built synthetic data; it is neither Google Analytics nor TSA.gov data. The spreadsheet is formula-driven from four monthly records and a normalized feedback collection. Counts below illustrate common analytics workflows and do not imply actual web traffic.

Measure	Definition
Zero-result rate	Zero-result site searches / all site searches (not sessions)
Helpfulness rate	Helpful votes / (helpful + unhelpful votes)
Resource download rate	Downloads / sessions; proxy, not a unique-user conversion rate
Survey negative share	Negative categorized responses / all categorized responses; sampled and not representative
Search term gap	Search query with repeated zero results or misleading content mapping

Synthetic KPI trends

Month	Sessions	Site searches	Zero-result queries	Zero-result rate
2026-07	3900	1450	235	16.2%
2026-08	4160	1530	218	14.2%
2026-09	4420	1610	201	12.5%
2026-10	4680	1690	184	10.9%

Oct 2026 has 1,690 searches and 184 zero-result searches (10.9%). Across the example sequence, the ratio decreases; the data alone does not establish causality or successful remediation.

Feedback classification and analysis

Normalized synthetic comments were assigned one primary theme (Navigation, Accessibility, Forms, Content, or Timeliness) and one sentiment (positive/negative). A real reporting process would maintain coding rules, intercoder checks on a sample, a privacy/retention policy, and confidence caveats; do not process real PII in an open GitHub repo.

The example feedback highlights findability of replacement-ID instructions, redundant appointment guidance, form labels and unclear eligibility steps. These are working hypotheses requiring user research, not confirmed root causes.

Recommended next actions and test plan

Recommendation	Owner	Validation metric	Review date
Add user-language synonyms for renew ID/account locked	Search Lead	Zero-result share for target queries	30 days after pilot
Consolidate scheduling instructions	Content Lead	Task-completion rate and duplicate count	30 days after launch
Remediate labels and PDF form guidance	Accessibility Lead	Verified test findings / retest result	Before publication
Reword eligibility steps and add examples	SME + Writer	Customer feedback trend + usability observations	60 days after launch

1. Review the baseline numbers with product and content stakeholders and flag anomalies or missing data.
2. Approve a targeted pilot and define success thresholds before changing content.
3. Implement only changes approved by the appropriate content owners and accessibility stakeholders.
4. Measure search outcomes and feedback after release, comparing consistent time windows and noting seasonality.
5. Publish a monthly one-page action summary and a quarterly trend narrative with limitations and unresolved work.

Example monthly executive summary

October: Example traffic was 4,680 sessions. Zero-result rate was 10.9%; the largest sample search concern was the phrase “renew ID.” Prioritize term mapping, duplicate retirement, and user-testing of the form guidance. Do not present a lower zero-result rate as a proven improvement until the release and comparable analytics period are documented.

Reference basis and limitations

Primary reference: https://www.section508.gov/test/documents/ . Additional source links and applicability are documented in review/REFERENCE_REGISTER.md.

Compliance note: Section 508 applies to covered federal ICT; WCAG 2.0 A/AA is incorporated by reference in the revised standards. WCAG 2.2 is noted only as complementary guidance. Automated checks do not establish full conformance. DHS Trusted Tester certification is not claimed.

Governance of analytics, survey and records

Standards review: November 3, 2026. These additional controls and verification expectations are recommendations or conditional obligations for real federal systems; they are not evidence that the fictional PSRO system is approved, tested or compliant.

Analytics provenance

A real digital service must record analytics tool, access authority, reporting time zone, event/query definitions, filtering rules, traffic exclusions, data ownership, period and change-control history. “Zero-result rate” is computed against search events; it is not a session-level conversion metric.

Privacy and collection review

Before using actual survey comments or analytics, coordinate with agency privacy and security officials. Determine whether the Privacy Act and PRA information collection review/OMB control number requirements apply; do not assume every voluntary survey is exempt. Apply appropriate disclosure, minimization, retention, access and aggregation rules.

Decision-quality safeguards

Use representative samples or explain selection bias. Keep raw themes and sentiment coding criteria, audit a second-coded subset, distinguish observed trends from causal conclusions, and establish an owner and verification method for each recommended action.

Retention

Check NARA-approved web and analytics records schedules before deleting datasets, logs, survey responses or public-facing content. Synthetic CSVs in this demonstration contain no actual respondents or user identifiers.
