2026 Full-Portfolio Technical & Regulatory Document Review

Scope: 13 individual PDF/DOCX technical writing artifacts across four project sets | Review date: November 2, 2026

Executive findings

- All 13 technical Word files have been regenerated with document-specific second-pass findings and references, then converted into new PDFs.
- GMP: maintain material quarantine until authorized release, distinguish QC disposition from supplier-document precheck, retain traceable CAPA evidence.
- ERP/UAT: trace requirements, mappings, defect correction and sign-off; distinguish demonstration UAT from regulatory validation.
- IT: make permissions and safe actions explicit; use NIST SP 800-61 Revision 3 for security response, not generic support.
- IAM: explicitly model Teams social engineering, external communication vs separately granted remote control, and evidence needed to substantiate compromise.
- Conditional legal regimes: FDA QMSR/CSA apply to applicable medical-device contexts; Part 11 to in-scope electronic records; Section 508 depends on federal ICT scope.
- Outstanding limitations: no legal certification, no product-/state-specific determination, no live lab or adversarial testing, no complete PDF/UA or accessibility validation.

Document-by-document verification

Project	Document	Reviewer emphasis
GMP	01 Controlled Document Lifecycle SOP	Control SOP scope; Training / change; Data integrity
GMP	02 Vendor and Incoming Material Data Review	Supplier verification; Quality-unit disposition; Material change
GMP	03 Investigation and CAPA Case Study	Evidence chain; CAPA decision; Release decision
GMP	04 Forms and Quality Review Toolkit	Form controls; Change/exception linkage; Review checklist
UAT	01 Business Requirements and Process Design	Scope/requirements; Security and records; Approval
UAT	02 Source to Target Data Mapping	Mapping provenance; Reconciliation acceptance; Change traceability
UAT	03 User Acceptance Test Plan	Test design; Release governance; Test versus

		validation
UAT	04 Defect Triage and Corrective Action Case	Reproducibility; Cause vs effect; Closed-loop test
UAT	05 End User Guide and Knowledge Base	Audience; Accuracy; Escalation / documentation
IT	01 IT Network Incident Triage SOP	Incident classification; Network triage; Closure
IT	02 Windows Troubleshooting Runbook	Command interpretation; Change authorization; Security red flags
IT	03 Documentation Validation Checklist	Technical review; Accessibility / design; Version and control
IAM	IAM Security Control Assessment and Remediation Plan	Teams threat chain; Review multiple systems; Current federal guidance; Remediation proof

Source verification and legal applicability

The review uses published material from FDA/eCFR, ICH, NIST, Microsoft Learn and the U.S. Access Board. Primary URLs and explicit limitations are in AUTHORITATIVE_SOURCES_AND_APPLICABILITY.md. Full clause-level certification of proprietary voluntary standards and all state/local rules is not possible absent a defined company, product, use and jurisdiction.

Design and accessibility

Dark-blue section headings and black body text are appropriate for recruiter-facing portfolio samples; neither FDA nor ICH generally prescribes blue vs black for a generic technical PDF. Document status and decisions are conveyed in words, not color alone. Full screen reader and PDF structure testing remains separate.
