Final November 2026 portfolio review: applicability, audit trail and limitations

Four independent fictional technical writing projects, 13 edited DOCX/PDF documents. Sources reviewed include current published FDA, eCFR, ICH, NIST, CISA, Microsoft and federal accessibility guidance. This document is an editorial crosswalk, not certification or legal advice.

2026 applicability and change log

Area	Applicable review focus	Regulatory boundary
Drug GMP / supplier data	21 CFR 210/211, FDA data integrity, ICH Q9(R1)/Q10; Q8/Q9/Q10 Q&A 2026	Only in-scope drug manufacturing; fictional QA/QC roles cannot approve material by description alone.
Medical device QMS	FDA QMSR/21 CFR Part 820 effective 2 Feb 2026; computer software assurance guidance Feb 2026	Device contexts only; do not claim universally applicable to pharma or commercial ERP.
Electronic records	21 CFR Part 11	Requires predicate rule and scope analysis, not triggered by generic use of Microsoft 365.
Human clinical trials	ICH E6(R3) GCP	Not presumed applicable to synthetic preclinical or commercial workflow examples.
IAM and federation	NIST SP 800-53 Rev5 5.2.0, SP 800-53A, CSF 2.0, SP 800-63-4, IR 8587 (Sep 2026)	Voluntary technical guidance unless adopted under a relevant binding program/contract.
Teams abuse	Microsoft 2026 threat report; Microsoft Learn Teams policies; CISA/FBI/HHS joint alert	External Teams calling is not desktop control; unauthorized persistence requires separate evidence.
IT incident response	NIST SP 800-61 Rev3 (2025)	Do not conflate routine device incidents and confirmed cybersecurity incidents.
Accessibility	Section 508 federal guidance / PDF/UA concepts	Tag presence alone does not establish accessible reading order, tables, or WCAG compliance.

Report-specific quality checks

- IAM: five additional fictional findings (F-10 through F-14), each with evidence type, control gap, remediation owner, proposed acceptance tests and open status; Teams and Entra risks distinguished.
- GMP: review responsibility, data integrity, quarantine/release, corrections, retention and CAPA effectiveness; link policy discussion to product scope.
- ERP/UAT: trace source data, requirements, results, defects and retesting; distinguish UAT from regulated validation.
- IT SOP: check non-destructive diagnostics, authorization, escalation and correct application of cyber response guidance.
- All technical documents: explicit fictional labeling, revision/version traceability, readable black text and navy heading styling, acceptance criteria and primary references.
- No document is represented as a signed and executed SOP, live audit, real systems assessment, verified vulnerability, penetration test, validated software or legally certified accessible file.

Remaining verification limitations

The publisher should independently verify full accuracy of every technical action in a supported lab, confirm edition/license-dependent settings, and run accessibility checks for document tags, headings, tables, link purpose and reading order. There is no meaningful universal list of “all applicable 2026 federal and state regulations” without a real company, product, data category, jurisdiction and regulated use case. This portfolio is an educational technical-writing artifact.
