2026 SECOND-PASS FEDERAL STANDARDS AUDIT

Scope: 12 demonstration PDFs in GMP Quality Documentation (4), Enterprise UAT / Data Migration (5), and IT Network Support (3). Review date: November 2, 2026. Source priority: FDA, eCFR/FDA regulation interpretation, ICH, NIST, U.S. Access Board. This is a publication-readiness technical audit, **not** legal counsel, manufacturing approval, controlled procedure validation, full standards conformance review, or an exhaustive search across every jurisdiction.

Executive findings

• The existing documents correctly distinguish fictional/synthetic procedures from site-approved SOPs and distinguish QA disposition from QC tests. Do not change this distinction.

• The prior report omitted explicit mention of FDA medical device QMSR effective February 2, 2026, and the February 2026 final Computer Software Assurance guidance. Neither should be retroactively presented as mandatory for a non-device pharmaceutical SOP or non-regulated ERP sample.

• The prior IT reference says NIST SP 800-53 Rev. 5. For precise 2026 bibliographies, specify **Release 5.2.0 (August 2025)**; continue citing incident response **SP 800-61 Rev. 3 (April 2025)**.

• NIST SP 800-18 Rev. 2 (June 2026) and NIST SP 1326 (July 2026) are relevant to future system-security and vendor cyber-risk documentation; they are optional context for these current samples.

• The PDFs contain a PDF /MarkInfo /Marked true flag, but that alone does not prove correct semantic tags, reading order, table headers, hyperlinks, or accessible text. No Section 508/PDF-UA certification is claimed.

Required scope and wording distinctions

Drug manufacturing GMP: 21 CFR Part 211 is a strong primary reference for a fictional *in-scope finished drug* procedure. Component examination/testing and quality-unit release are not satisfied merely by a complete supplier packet. Product type and stage may alter the precise requirements.

Electronic records and UAT: 21 CFR Part 11 applicability must be assessed based on FDA predicate-record requirements and business use of electronic records/signatures. A simulated ERP UAT plan is not FDA computer system validation. Use terms such as *illustrative UAT evidence* and avoid *FDA validated*.

Medical devices: Only an explicitly device-manufacturing case should treat 21 CFR Part 820 QMSR and incorporated ISO 13485:2016 as direct regulatory scope. FDA Computer Software Assurance final guidance issued February 2026 is for production and QMS software used in device contexts.

Human research: ICH E6(R3) GCP (FDA final Sep 2025) concerns human clinical trials. It does not automatically attach to fictional preclinical research or manufacturing QC work. 21 CFR Part 58 GLP may warrant a future *preclinical nonclinical laboratory* example if a real study is modeled.

IT documentation: NIST references are voluntary recommendations unless adopted by a governing contract, agency requirement, or organization. Routine DNS problems are not automatically cybersecurity incidents. Avoid implying security incident reporting obligations from ordinary help-desk tickets.

State rules: No U.S. state-specific regulatory duty can be identified without knowing where the fictional facility, data subjects, and regulated activity are located. State privacy, breach notification, pharmacy, device, and laboratory rules vary. State-law review is explicitly out of scope.

Accessibility and visual design

Navy headings with black body text are acceptable as design choices; no FDA/ICH rule mandates blue or black-and-white SOP templates. Do not use color alone to encode status. For federal Section 508 contexts, apply the applicable electronic-document requirements, evaluate meaningful reading order, headings, tagged tables, alternate text, link labels, and keyboard/navigation order. The U.S. Access Board baseline explicitly maps to Section 508/WCAG 2.0 rather than

implying WCAG 2.2 is itself a universal federal legal requirement.

Federal authoritative reference register

FDA 21 CFR Part 820 QMSR / ISO 13485:2016 — Binding for in-scope finished medical device manufacturers. Effective Feb 2, 2026; NOT automatically applicable to fictional drug SOP
https://www.fda.gov/medical-devices/postmarket-requirements-devices/quality-management-system-regulation-qmsr

FDA Computer Software Assurance (Feb 2026) — FDA nonbinding guidance / device manufacturing/QMS. Risk-based assurance of device production/QMS software; not universal ERP validation
https://www.fda.gov/regulatory-information/search-fda-guidance-documents/computer-software-assurance-production-and-quality-management-system-software

FDA ICH E6(R3) GCP (Sep 2025) — Nonbinding clinical trial guidance. Applies to human trial conduct; not preclinical labs or generic supplier SOP by default
https://www.fda.gov/regulatory-information/search-fda-guidance-documents/e6r3-good-clinical-practice-gcp

FDA ICH Q8/Q9/Q10 Q&A; R5 May 2026 — Nonbinding FDA guidance. Quality risk and pharma quality system current implementation Q&A;
https://www.fda.gov/regulatory-information/search-fda-guidance-documents/q8-q9-and-q10-questions-and-answers

NIST SP 800-53 Release 5.2.0 Aug 2025 — Federal control guidance, applicability contextual. More current than generic Rev 5 label; software update and supply-chain changes
https://csrc.nist.gov/news/2025/nist-releases-revision-to-sp-800-53-controls

NIST SP 800-18 Rev 2 Jun 2026 — Federal system planning guidance, scope contextual. System security/privacy/C-SCRM plans; not an ordinary help-desk SOP mandate
https://csrc.nist.gov/pubs/sp/800/18/r2/final

NIST SP 800-61 Rev 3 Apr 2025 — Federal cybersecurity incident-response guidance. Supersedes Rev 2; ordinary network incident not automatically security breach
https://csrc.nist.gov/pubs/sp/800/61/r3/final

NIST SP 1326 Jul 2026 — Federal cybersecurity supply-chain recommendation. Vendor cyber due-diligence; not same as drug supplier QA
https://csrc.nist.gov/Projects/cyber-supply-chain-risk-management/publications

Federal Section 508 ICT Testing Baseline for Documents — Federal accessibility requirements when scoped to federal ICT. Electronic document baseline maps to Section 508 / WCAG 2.0 A/AA (not automatically WCAG 2.2)
https://ictbaseline.access-board.gov/

FDA Part 11 scope and application guidance — Conditional rule plus nonbinding interpretive guidance. Need predicate rule and electronic record reliance decision
https://www.fda.gov/regulatory-information/search-fda-guidance-documents/part-11-electronic-records-electronic-signatures-scope-and-application

Publication decision / quality gate

Conditional publication recommendation: These are suitable as clearly marked educational writing samples after a human review of correctness and accessibility. Existing fictional content is not newly certified or live-tested. The second-pass audit did not identify a general need to impose medical device QMSR, human GCP, or state rules on the three current fictional project types. Recommended follow-up work: manual tagged-PDF/accessibility review, versioned references with access dates, technical lab execution of networking steps, and richer example evidence for UAT and SOP documents.
